Project Abstract Submission Form

Sec No- 10	Team No- 303	Project Title- Interview Practice Platform – AI Resume Matching & Feedback
---------------	--------------	--

1. Abstract

Job seekers today face two connected problems: over 75% of resumes are filtered out by ATS systems or recruiters before a human ever reviews them, and even candidates who land interviews often prepare using generic, one-size-fits-all question banks that don't reflect the actual role. Practicing alone also gives no structured feedback on answer quality, pacing, or delivery — the factors that most decide interview outcomes.

This project proposes an AI-powered Interview Practice Platform that addresses both gaps. Candidates upload their resume, which is parsed using spaCy to extract skills and experience. A sentence-transformers embedding model then scores the candidate's fit against a seeded job dataset, returning ranked, role-specific matches. Based on the matched job and identified resume gaps, an LLM (Groq/Gemini) generates targeted mock interview questions. Candidates respond via in-browser mic/camera capture (getUserMedia + MediaRecorder), and their spoken answers are transcribed using faster-whisper. The system then returns structured, LLM-based feedback on both content and delivery, storing sessions, transcripts, and scores in MongoDB for progress tracking over time.

The platform follows a three-tier architecture: a React frontend, a Node.js/Express backend handling auth and session orchestration, and a separate Python/Flask AI microservice for parsing, matching, question generation, and transcription — keeping AI logic isolated and swappable. The entire stack runs on free-tier and open-source infrastructure, making it accessible and low-cost to deploy, while directly closing the personalization and feedback gaps in current interview preparation tools.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520090018	RASAGNYA MACHANAVAJHALA	
2520090072	NIYATHI KONDUPARTHY	
2520080016	VARSHITH COMPLE	

3. Frameworks / Platforms / Software Used

- React.js — frontend
- Node.js + Express — backend/auth/orchestration
- Python (Flask) — AI microservice
- spaCy — resume parsing & entity extraction
- sentence-transformers — embedding-based job matching
- faster-whisper — speech-to-text transcription
- Groq / Gemini API — question generation & feedback
- MongoDB Atlas — session, transcript & score storage
- Git / GitHub — version control

Guide Name and Signature (remarks if any)
